PROFESSIONAL SUMMARY

Software engineer with 2 years of hands-on experience across backend and frontend development — Python/Flask, React/Redux — on a live enterprise SaaS platform. Contributed to building agentic AI features (LangChain) with human-in-the-loop review, and uses AI coding assistants (Claude Code) daily as part of the development workflow. Strong fundamentals in REST APIs, databases, and Git-based collaboration, with a genuine eagerness to keep learning and grow under experienced engineers.

EDUCATION

B.Tech, Information Technology — VNR Vignana Jyothi Institute of Engineering & Technology, Hyderabad

2020 – 2024 | CGPA: 8.44 / 10.00

Intermediate (MPC) — Sri Chaitanya IIT Academy, Hyderabad

2018 – 2020 | Percentage: 97.10%

EXPERIENCE

Software Engineer — Thinqor Solutions Pvt. Ltd., Hyderabad

Jan 2025 – Present

ThinqHire — Enterprise Applicant Tracking System (ATS)

- Contributed to building a LangChain-based agentic AI feature that parses uploaded resumes and job descriptions into structured records, with a human-in-the-loop review step, cutting manual data entry effort by ~50%.
- Wrote clean, maintainable code across a React.js/Redux frontend and Python (Flask) backend for a production, multi-tenant application, working with APIs, databases, and cloud infrastructure.
- Worked with AWS infrastructure (EC2, S3) and containerized services using Docker, gaining hands-on exposure to cloud deployment and Kubernetes orchestration.
- Debugged and resolved a database performance issue through targeted SQL indexing, cutting average API response time from ~800ms to under 200ms.
- Participated in code reviews and collaborated with product stakeholders to understand requirements and demo solutions, contributing to feature delivery from requirements through deployment.
- Used AI coding assistants (Claude Code) daily to support development, debugging, and learning, while collaborating with teammates to build strong engineering habits.
- Identified and helped seal two critical data leaks during a security review — an unscoped reports route and an unscoped duplicate-candidate checker — that were silently exposing data across enterprise client organizations, preventing real cross-tenant data exposure before it reached customers.

HRMS Portal — Internal HR Management System

- Contributed to a full-stack HR portal (React, Flask, MySQL) covering leave, payroll, and attendance, helping build role-based dashboards and secure session management.

PERSONAL PROJECTS

Personalized News Aggregator

- Built a Flask + NLP platform that scrapes multi-source articles (BeautifulSoup) and applies TF-IDF classification, with server-side pagination and sub-300ms API response times.

Chest Disease Segmentation — Deep Learning Medical Imaging

- Built a deep-learning medical imaging pipeline (TensorFlow, Keras, UNet) for chest X-ray classification across COVID-19, pneumonia, and normal cases, achieving 98.6% accuracy with interpretable overlay masks.

TECHNICAL SKILLS

Gen AI / AI-Assisted Development: LangChain, LLM-based Agents, Prompt Engineering, AI Coding Assistants (Claude Code)

Languages: Python, JavaScript, TypeScript, Java, C++, SQL

Frontend: React.js, Redux, HTML5, CSS3, Responsive Design

Backend: Flask, FastAPI, RESTful APIs, JWT, Role-Based Access Control

Databases & Cloud: MySQL, PostgreSQL, MongoDB, AWS (EC2, S3), Docker, Kubernetes (exposure)

Practices: Git/GitHub, Agile, Code Reviews, Team Collaboration

CERTIFICATIONS & ACHIEVEMENTS

- AWS Certified Cloud Practitioner — In Progress (Expected Jul 2026)
- C++ Programming: From Beginner to Beyond — Learn Programming Academy
- Smart India Hackathon (SIH) 2022 — Internal Round Cleared
- VNRVJIEET Convergence Hackathon — Top 10 Finalist
